

Austin-Chris Iwu

Full-Stack Developer | Embedded Systems Engineer | Electrical/Electronics Engineer

Owerri, Nigeria | Nigerian | Available worldwide (remote) | austinchrisiwu@gmail.com | austinchris.me | github.com/AustinChris1 | linkedin.com/in/austinchris1 | t.me/thatcreator | @AustinChris_

PROFILE

Full-stack developer and Electrical/Electronics Engineering graduate with experience designing and building scalable web platforms, embedded systems, IoT products, computer-vision tools and blockchain applications. Skilled in React, Laravel, Node.js, MySQL, Firebase, ESP32, Arduino, Python and modern deployment workflows. Strong record of shipping practical products across education, commerce, agriculture, security, fintech and Web3, including 30+ completed projects and hackathon builds on Zcash and OG. Active open-source contributor to the Zcash ecosystem through ZecHub, working in the open alongside community maintainers.

EXPERIENCE

Software Developer | First Digit Communications Ltd.

Sep 2024 - Present

Abuja, Nigeria | Full-stack, embedded and product delivery

- Built and shipped FirstDigit Academy, a full learning-management system with course management, student enrollment, progress tracking and interactive learning.
- Developed FirstSmart Mart, a production e-commerce platform with cart, checkout, inventory, admin dashboard, Paystack payments and bank-transfer flows.
- Engineered a face-recognition security and Telegram-alerting system using Node.js, face-api.js and ESP32-CAM for real-time suspect detection.
- Built School Finder, a Nigeria-wide school directory with rich filters and verified profiles, plus SOHADAN and First Digit corporate websites.
- Collaborated across requirements gathering, UI implementation, backend API design, database work, deployment and iterative product support.

Independent Developer | Full-Stack, IoT and Blockchain

2021 - Present

Self-directed product engineering, research builds and hackathons

- Designed and delivered AgroSense360, an AI + IoT multilingual rover for smart crop-health monitoring and farmer advisory.
- Competed in Zcash and OG hackathons, shipping Sign In With Zcash, ZBooks and OG Receipts under competitive deadlines.
- Built tooling across Solana, Internet Computer/Motoko, event-driven trading systems and responsive React/Tailwind interfaces.
- Maintained a broad engineering practice spanning backend services, front-end interfaces, embedded hardware, vision models and cloud deployment.

Open Source Contributor | ZecHub (Zcash Ecosystem)

Ongoing

Community-maintained Zcash education and ecosystem tooling

- Contribute to ZecHub, the community-driven education and documentation hub for the Zcash ecosystem.
- Build open-source tooling for Zcash, including Sign In With Zcash (SIWZ), a non-custodial wallet-authentication primitive, and ZBooks for shielded-ZEC teams.
- Work in the open alongside community maintainers, contributing through public repositories and ecosystem discussion.

EDUCATION

B.Eng. Electrical and Electronics Engineering

Aug 2021 - Oct 2025

Federal University of Technology, Owerri (FUTO), Imo State, Nigeria | Electronics and Computing major

Final-Year Project: AgroSense360 - AI and IoT-based multilingual rover for smart crop-health monitoring and advisory.

West African Senior School Certificate Examination (WASSCE)

2014 - 2020

Federal Government College, Okigwe, Imo State, Nigeria

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, PHP, Python, C/C++, SQL, Motoko, HTML, CSS	Frontend	React, Next.js, TailwindCSS, GSAP, Three.js, Framer Motion, Bootstrap
Backend	Laravel, Node.js, REST APIs, authentication, admin dashboards, payment flows	Databases	MySQL, Firebase/Firestore, schema design, data modelling
Embedded	ESP32, ESP32-CAM, Arduino, Raspberry Pi, IoT sensors, Proteus	AI/Vision	MediaPipe, face-api.js, computer vision workflows, AI product prototyping
Blockchain	Solana, Internet Computer, Motoko, Zcash, OG Compute, OG Storage, TEE concepts	Tools	Git, Linux, Vite, Vercel, cloud deployment, Telegram Bots, Paystack

KEY PROJECTS

AgroSense360 - AI and IoT Multilingual Rover

Final-Year Project

React | Firebase | ESP32 | Arduino | Python

- Built a smart crop-health monitoring rover that combines AI vision and IoT sensors for farm condition awareness.
- Designed a multilingual advisory layer so farmers can receive practical recommendations in familiar language.
- Integrated hardware sensing, software dashboarding and AI-driven analysis into one end-to-end prototype.

FirstDigit Academy

acad.firstdigit.com.ng

Full learning-management system with course administration, enrollment, progress tracking and interactive learning.

React, Laravel, MySQL

FirstSmart Mart

Production e-commerce

E-commerce platform with cart, checkout, inventory, admin dashboard, Paystack integration and bank-transfer workflows. *React, Laravel, MySQL, Paystack*

School Finder

schoolfinderabuja.com

Nigeria-wide school directory with verified profiles, search and filtering for parents, students and institutions. *React, Laravel, MySQL*

Sign In With Zcash (SIWZ) + ZBooks

siwz.vercel.app

Non-custodial wallet authentication primitive for Zcash, plus accounting and payroll tools for shielded-ZEC teams. Built for the ZecHub Hackathon. *Next.js, TypeScript, ZIPs, ZingoLib*

OG Receipts - Verifiable AI Track Records

Ogreceipts.vercel.app

Tamper-proof AI prediction records using TEE sealed inference on OG Compute and timestamped persistence on OG Storage. Built for OG Zero Cup 2026. *Next.js, OG Compute, OG Storage*

Atelier Fit - Virtual Body Measurement

body-measurement-green.vercel.app

Computer-vision tailoring tool that estimates measurements from two phone photos and height, suggests a ready-to-wear size and exports a measurement card. *React, TailwindCSS, MediaPipe*

Attendance System - RFID + ESP32-CAM

github.com/AustinChris1/AttendanceSystem

Attendance tracking system with real-time analytics, automated reporting and camera-assisted verification. *React, Firebase, ESP32-CAM*

Theia Trading Bot

theiatrading.vercel.app

Event-driven trading system combining on-chain flows, liquidations, unlocks and macro events into one confluence-scored signal engine. *Node.js, blockchain data*

RESEARCH AND TECHNICAL STUDIES

AI and IoT-Based Crop Health Monitoring

Completed

Designed an applied research prototype combining embedded sensing, AI vision and multilingual advisory for smallholder agriculture.

Computer-Vision Measurement from Consumer Photos

Completed

Explored pose/landmark detection and proportional estimation for tailoring measurements using lightweight browser-accessible tooling.

Verifiable AI and Privacy-Preserving Blockchain Workflows

Hackathon research

Built prototypes around wallet authentication, shielded-value accounting and tamper-evident AI outputs on emerging blockchain infrastructure.

EXTRA CURRICULARS AND ACHIEVEMENTS

Open Source Contributor

Contributes to ZecHub, the community-driven education and tooling hub for the Zcash ecosystem.

Product Portfolio

Shipped 30+ projects across web, IoT, embedded systems, blockchain, fintech and security.

Technical Mentorship

Supports peers and juniors with full-stack, embedded and product-build guidance.

Hackathon Builder

Built and submitted Zcash and OG ecosystem projects under competitive timelines.

Hardware + Software Integration

Built systems that combine ESP32/Arduino hardware with dashboards, alerts and cloud data flows.

LANGUAGES

English

Fluent professional working proficiency

Igbo

Native fluency
