PROFILE

B.Eng. Electrical and Electronics Engineering, Second Class Upper (CGPA 4.09 / 5.00), Federal University of Technology, Owerri. I build production software and the hardware it talks to: platforms at First Digit, an AI and IoT crop-health rover for my final-year project, and open-source systems work. Two hackathon wins in 2026, Best Stablecoin Adoption at Celo Agents at Work and Wave 1 of the Midnight Buildathon. Nigerian, based in Owerri. Open to funded graduate study abroad and to software or embedded roles.

EDUCATION

B.Eng. Electrical and Electronics Engineering Aug 2021 - Oct 2025

Federal University of Technology, Owerri (FUTO), Imo State, Nigeria
Electronics and Computing · Second Class Honours (Upper Division) · CGPA 4.09 / 5.00

Final-year project: AgroSense360, an AI and IoT multilingual rover for crop-health monitoring and farmer advisory. Designed the sensing stack (ESP32/Arduino), a vision pipeline, and a React/Firebase dashboard that returns recommendations in local languages.

West African Senior School Certificate (WASSCE) 2014 - 2020

Federal Government College, Okigwe, Imo State, Nigeria

HONOURS AND AWARDS

Best Stablecoin Adoption · Celo Agents at Work Hackathon Sep 2026

For Earmark, a non-custodial group-payment agent live on Celo mainnet.

Wave 1 winner · Midnight Buildathon Sep 2026

For Equilux, employee-verifiable pay-gap reporting with zero-knowledge proofs.

EXPERIENCE

Software Developer · First Digit Communications Ltd. Sep 2024 - Present

Abuja, Nigeria (remote from Owerri) · Full-stack product and embedded delivery

- Shipped FirstDigit Academy (acad.firstdigit.com.ng): course administration, student enrollment, and progress tracking on React, Laravel, and MySQL.
- Built FirstSmart Mart (spx.firstdigit.com.ng): catalog, cart, checkout, inventory, admin dashboard, and Paystack plus bank-transfer payments.
- Launched School Finder (schoolfinderabuja.com), a Nigeria-wide directory from nursery to tertiary so parents can filter and compare verified school profiles.
- Delivered the First Digit corporate site and the SOHADAN association site (sohadan.ng), the latter with GSAP motion on a React/Laravel stack.
- Engineered a face-recognition security pipeline using Node.js, face-api.js, and ESP32-CAM, with Telegram alerts on detection.

TECHNICAL SKILLS

Programming	JavaScript, TypeScript, PHP, Python, C/C++, SQL, Motoko, Solidity, HTML, CSS
Frontend	React, Next.js, Tailwind CSS, GSAP, Three.js, Framer Motion
Backend	Laravel, Node.js, REST APIs, authentication, payments, admin dashboards
Data	MySQL, Firebase/Firestore, SQLite, schema design
Embedded	ESP32, ESP32-CAM, Arduino, Raspberry Pi, IoT sensors, Proteus
Vision / AI	MediaPipe, face-api.js, browser vision pipelines, TEE sealed inference
Onchain	Solidity, Celo, Midnight, Zcash, Solana, Flare, OG, zero-knowledge proofs
Tools	Git, Linux, Vite, Vercel, Telegram Bots, Paystack, Jupiter API

LANGUAGES

English · Fluent (language of instruction) **Igbo** · Native

SELECTED PROJECTS AND HACKATHONS

Earmark · Celo Agents at Work · **Winner, Best Stablecoin Adoption**

Sep 2026 · earmark-agent.onrender.com

Telegram agent on Celo that collects money for one shared bill, such as school fees, and can only pay the wallet the group locked in when the drive was created. Each share moves straight from the payer to the payee in a single transaction, so the contract never holds a balance and there is no treasurer to trust; the bot tracks who has paid and nudges the rest.

Supports 25 Celo stablecoins, x402 payments from other agents, fee abstraction, and ERC-8004 agent identity. Live on Celo mainnet. *Solidity, Celo, TypeScript, React, x402, ERC-8004* · github.com/AustinChris1/Earmark

Equilux · Midnight Buildathon · **Wave 1 winner**

Sep 2026 · equilux-lac.vercel.app

Employee-verifiable pay-transparency reporting on Midnight, aimed at the EU Pay Transparency Directive's mandatory gender pay gap reports (first due June 2027). A company proves its published gap was computed from its complete payroll, co-signed by its own employees, without any salary being revealed to the public, colleagues, the regulator or Equilux. A Compact zero-knowledge circuit rejects omitted, invented or duplicate records and verifies the mean gap without in-circuit division; each worker holds a private inclusion receipt. Run end to end on a local Midnight network with real proofs. *Midnight, Compact, zero-knowledge proofs, TypeScript, React* · github.com/AustinChris1/Equilux

ZBooks and Sign In With Zcash (SIWZ) · ZecHub

zecbooks.vercel.app

Non-custodial accounting for Zcash teams: treasury reads through a Unified Full Viewing Key, P&L and CSV export, and M of N payouts HMAC-bound to the payable set, signed from the treasurer's own wallet via a ZIP 321 QR. SIWZ, in the same repo, is the Zcash-native sign-in primitive. *Next.js, TypeScript, Zcash* · github.com/AustinChris1/ZBooks-SIWZ

Heirloom · Flare Summer Signal

heirloom.wtf

Trustless dead-man's switch for XRP. A private will is sealed in a Flare Confidential Compute enclave; after a proof-of-life gap and an M of N guardian threshold the enclave prices against the FTSO feed and signs XRPL payouts. The XRP never leaves the ledger. *Flare, confidential compute, XRPL* · github.com/AustinChris1/Heirloom

Prion · Hack Hydra

useprion.vercel.app

Walks the citation graph on HydraDB after a retraction, scores how load-bearing each edge is, and decays contamination across hops. Splits citations into pre-retraction, post-retraction, and latent (cited before the notice and never corrected). Missing full text is excluded, never guessed. *HydraDB, Next.js, OpenAlex* · github.com/AustinChris1/prion

Aval · Botchain #2

aval-botchain.vercel.app

A letter of credit for AI agents. Funds lock to a job, a rulebook, and an examiner; the agent never holds the money. The fee is drawable only after the named examiner scores the evidence hash on the ERC-8004 Validation Registry. The credit is an ERC-721, so the claim is assignable. *Solidity, BOT Chain, ERC-8004, Next.js* · github.com/AustinChris1/Aval

Clawback · PixelForge

clawbackhq.vercel.app

An agent that reads retail emails, works out what companies still owe, and drafts the claim for the user to send. Classifies mail under a strict JSON schema, links a later sale back to an earlier receipt, and checks retailer policy windows (price drop, late delivery, return, warranty). *TypeScript, Next.js* · github.com/AustinChris1/Clawback

OG Receipts · OG Zero Cup

ogreceipts.vercel.app

An AI football-forecast track record that cannot be edited after the fact. Each pick is generated by sealed inference on OG Compute (TEE-signed, attestation verified on every call) and written to OG Storage with an on-chain transaction before kickoff. A bundled verifier lets anyone re-check the receipt later. *Next.js, OG Compute, OG Storage, TEE* · github.com/AustinChris1/OG-Zero-Cup-Vibeathon

Theia ASP · OKX AI

Agent #6004 on X Layer

Crypto intelligence for trading agents on OKX.AI: wash volume, float concentration, exchange-custody flows, and liquidations. Priced per call in USDT via x402 on X Layer and exposed as MCP tools. An LLM may narrate the output; it never decides a trade. *Node.js, OKX.AI, x402, MCP* · github.com/AustinChris1/Theia-ASP-Agent
