SUMMARY

Full-Stack Developer and Embedded Systems Engineer (**B.Eng, Electrical & Electronics**) who ships products end-to-end — from **React / Laravel** web platforms and production LMS & e-commerce systems, to **ESP32 / IoT** hardware and **AI-driven blockchain** tooling. 30+ projects delivered, including an AI + IoT multilingual crop-monitoring rover and multiple hackathon builds on **Zcash** and **OG**. Equally comfortable across the stack and down to the silicon.

EXPERIENCE

Software Developer · First Digit Communications Ltd.

Sep 2024 – Present

Abuja, Nigeria · Full-stack & embedded delivery

- Built and shipped **FirstDigit Academy**, a full learning-management system (course management, enrollment, progress tracking, live interaction) with React, Laravel & MySQL.
- Developed **FirstSmart Mart**, a production e-commerce platform — cart, checkout, inventory and admin with **Paystack** and bank-transfer payments on a Laravel API.
- Engineered a **face-recognition security & Telegram alerting** system using Node.js, face-api.js and **ESP32-CAM** for real-time suspect detection.
- Delivered **School Finder** (Nigeria-wide school directory) plus the SOHADAN association site and the First Digit corporate website.

Independent Developer · Full-Stack & IoT

2021 – Present

Web · Embedded · Blockchain · AI

- Designed and shipped **AgroSense360** — an AI + IoT multilingual rover for smart crop-health monitoring & advisory (React, Firebase, ESP32, Arduino, Python).
- Competed in blockchain hackathons: **Sign In With Zcash** (ZecHub) and **OG Receipts** (OG Zero Cup 2026), building novel auth and verifiable-AI primitives.
- Built crypto/blockchain tooling across **Solana, Internet Computer (Motoko)** and event-driven trading systems.

SELECTED PROJECTS

AgroSense360

AI · IOT

Final-year project

AI-vision + IoT-sensor rover that monitors crop health and advises farmers in their native language. [React](#) · [Firebase](#) · [ESP32](#) · [Arduino](#) · [Python](#)

Sign In With Zcash (SIWZ) + ZBooks

WEB3

[siwz.vercel.app](#) ↗

The auth primitive Zcash didn't have — non-custodial, drop-in wallet sign-in, plus accounting & payroll for shielded-ZEC teams. Built for the ZecHub Hackathon. [Next.js](#) · [TypeScript](#) · [ZIPs](#) · [ZingoLib](#)

OG Receipts

VERIFIABLE AI

[Ogreceipts.vercel.app](#) ↗

Makes AI prediction track records impossible to fake — picks generated by TEE Sealed Inference on OG Compute and timestamped on-chain to OG Storage. OG Zero Cup 2026. [Next.js](#) · [OG Compute](#) · [OG Storage](#)

Theia Trading Bot

FINTECH

[theiatrading.vercel.app](#) ↗

Multi-factor, event-driven trading system fusing on-chain flows, liquidations, token unlocks and macro events into one confluence-scored signal, with optional execution. [Node.js](#) · [Blockchain](#)

Atelier Fit

COMPUTER VISION

[body-measurement](#) ↗

Estimates full tailoring measurements from two phone photos + height, suggests a ready-to-wear size and exports a measurement card. [React](#) · [TailwindCSS](#) · [Google MediaPipe](#)

Attendance System

IOT

[github](#) ↗

RFID + ESP32-CAM attendance tracking with real-time analytics and automated reporting. [React](#) · [Firebase](#) · [ESP32-CAM](#)

TECHNICAL SKILLS

Languages

JavaScript, TypeScript, PHP, Python, C/C++ (Arduino/ESP32), SQL, Motoko, HTML, CSS

Frontend

React, Next.js, TailwindCSS, GSAP, Three.js, Framer Motion, Bootstrap

Backend & Data

Laravel, Node.js, REST APIs, MySQL, Firebase

Embedded & IoT

ESP32, ESP32-CAM, Arduino, Raspberry Pi, IoT sensors, Proteus, MediaPipe, face-api.js

Blockchain

Solana, Internet Computer (Motoko), Zcash (ZIPs, ZingoLib), OG (Compute/Storage/TEE)

Tooling

Git, Linux, Vite, Vercel, Cloud Deployment, Telegram Bots, Paystack

EDUCATION

B.Eng. Electrical & Electronics Engineering

Aug 2021 – Oct 2025

Federal University of Technology, Owerri (FUTO) · Electronics & Computing major

Final-Year Project: AgroSense360 — AI & IoT-based multilingual rover for smart crop-health monitoring and advisory.
